

Hi there,

Thank you Rachel for compiling the plan.

Ecology survey details would certainly be very useful before looking at the management of area A.

Jon and Liam - is it right to assume that the cut and collect machinery is available to grounds maintenance for managing the more immediate grass areas (E) as described? Is there anything that you don't have? I am sure we can provide more detail/information.

Dai - Regarding the community garden development – as discussed – it would be best if there was at least an existing interest identified from within the local community. From what I understood from our discussions, there was some intentions to do some engagement around this still? I wondered if some small scale tree planting across the housing estate (as well as Rachel's proposed hedgeline) – might be a good focus for some engagement activities?

We can discuss further if you have some time to?

**Cofion cynnes,  
Kind regards,**

**Matthew Collinson**
